ATLANTIC ACTION PLAN

## ATLANTIC POWER CLUSTER Marine Renewable Energy Partnerships

 Promote entrepreneurship and innovation	 Protect, secure and enhance the marine and coastal environment	 Create a socially inclusive and sustainable model of regional development
---	--	---

Atlantic regions have a huge potential in renewable energy which can be useful for the EU to meet the goals of its energy strategy, while contributing to the prosperity of their industries and populations, and meeting the objectives of economic, social and territorial cohesion.

The Atlantic Power Cluster project builds on the Marine Energy Working Group set up in the CPMR (Atlantic Arc Commission) and is intending to implement a transnational marine energy strategy so its partner regions can seek complementarities to tackle crucial challenges for the development of marine energies in the Atlantic Area (AA). Furthermore the project seeks to develop cooperation and joint approaches to facilitate the identification of new market niches in the renewable energy sector and the redefinition of educational and training programs as per the needs of the offshore and marine energy sector in the AA. The project is also expected to contribute to a “greener” model of energy development, while enhancing the competitiveness and innovation capacities of the Atlantic regions.

### Outcomes of the project

- Development of a stakeholder network and partnership agreements - Signature of the Atlantic Power Cluster Accord,
- Seventeen partners involved in Atlantic region wide analysis of skills & qualifications requirements for the Marine Renewable Energy Industry.
