CLIMATLANTIC

Local and Regional Actions for
Carbon Footprint Reduction

CLIMATLANTIC aimed at developing strategies at regional and local level towards the reduction of carbon footprint in the European Atlantic Area.

The project focused in four essential issues: mobility, energy, territorial management and social behavior. Concrete strategies, validated through pilot actions, were led and involved the creation of think tank groups with experts from all partners with the aim of promoting the sharing and creation of knowledge among its members. Other actions involved: joint transnational pilot projects analyzed and validated by the think tank groups prior to implementation; promotion of an Atlantic debate with regional and local authorities with the collaboration of existing networks of regional and local authorities, congress organization for the approval of the project's final output, a Strategic Atlantic Agenda for sustainable urban development for the reduction of the carbon footprint.

Outcomes of the project

- Guidance document "Common Atlantic Strategy for Sustainable Urban Development and Reduction of Carbon Footprint"
- Best practice guidelines encouraging effective marine management and decision-making across borders
