

Regeneration across generations

Socially Inclusive & Sustainable Development of the Atlantic Seaboard

SUPPORT TEAM for the
ATLANTIC ACTION PLAN

Atlantic Project Awards 2017 candidate

Project description

From fishing and aquaculture, to sports, tourism and maritime transports, the importance of activities linked to the sea in Galicia and Northern of Portugal is self-speaking. These are omnipresent and make part of the day to day scenery. However, their diversity and multiplicity of challenges faced by maritime professionals require on-going vigilance and tools to assist their decision making.

The four year (2011-2015) INTERREG project [RAIA-CO](#) addressed this challenge by improving trans-boundary (ES/PT) ocean observations and prediction mechanisms, allowing for the production of extremely valuable oceanographic and meteorological information for the management and exploitation of resources and activities. Furthermore, the project has enabled the co-development, with end users, of services and products using the collected marine data and contributing directly to the productivity, sustainability and competitiveness of coastal activities.

Outcomes of the project

- Different services and online tools such as **upwelling index**, **specific forecast to harbors and ports** and **specific products for fishing and aquaculture activities**.
- Sustaining and strengthening of **measuring infrastructures and operational models** feeding the products and services produced under the RAIA-CO project.
